

# Women's (Dis-)Empowerment Post-Civil War

The Impact of Conflict on Female Labour Force Participation in Côte d'Ivoire

Alina Greiner

University of Konstanz

Doctoral Workshop 18.09.2020

# Introduction

## ▷ Research Question

- ▶ Does exposure to civil war lead to changes in women's labour force participation?

# Introduction

- ▷ Research Question
  - ▶ Does exposure to civil war lead to changes in women's labour force participation?
- ▷ Theoretical & empirical puzzle

# Introduction

## ▷ Research Question

- ▶ Does exposure to civil war lead to changes in women's labour force participation?

## ▷ Theoretical & empirical puzzle

## ▷ Open question

- ▶ Will these changes be sustainable and translate into lasting change to women's roles post-war?

# Previous findings

What happens to female participation post-war?

- 1 Return to status quo (Wood, 2008)  
= no treatment effect

# Previous findings

What happens to female participation post-war?

- 1 Return to status quo (Wood, 2008)  
= no treatment effect
- 2 Higher rates of female participation (Hughes and Tripp, 2015)  
= positive treatment effect

# Previous findings

What happens to female participation post-war?

- 1 Return to status quo (Wood, 2008)  
= no treatment effect
- 2 Higher rates of female participation (Hughes and Tripp, 2015)  
= positive treatment effect
- 3 Lower rates of female participation (Akbulut-Yuksel et al., 2016)  
= negative treatment effect

# Theory

- ▶ Whether women participate in activities outside the home depends on their willingness and opportunity to do so

# Theory

- ▶ Whether women participate in activities outside the home depends on their willingness and opportunity to do so
- ▶ Shaped by perception of changes & response to conflict experiences

# Theory

- ▶ Whether women participate in activities outside the home depends on their willingness and opportunity to do so
- ▶ Shaped by perception of changes & response to conflict experiences
- ▶ Are women subject to war-induced empowerment or disempowerment?

# Theory

- ▶ Whether women participate in activities outside the home depends on their willingness and opportunity to do so
- ▶ Shaped by perception of changes & response to conflict experiences
- ▶ Are women subject to war-induced empowerment or disempowerment?
- ▶ Direction of effect unclear

# Expected Treatment Effect

## *H1 - Empowerment*

Civil war increases women's likelihood to work outside the home.

# Expected Treatment Effect

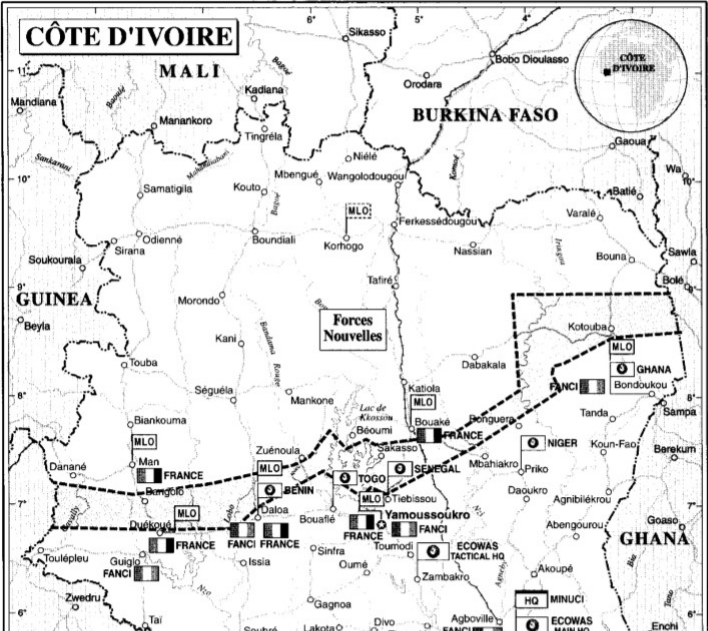

## *H1 - Empowerment*

Civil war increases women's likelihood to work outside the home.

## *H2 - Disempowerment*

Civil war decreases women's likelihood to work outside the home.

# Case Selection

# Data Source and Measurement

- ▶ Geo-coded survey data (DHS) collected before and after the civil war in Côte d'Ivoire

# Data Source and Measurement

- ▶ Geo-coded survey data (DHS) collected before and after the civil war in Côte d'Ivoire
- ▶ Women between 15 and 49 were interviewed

# Data Source and Measurement

- ▶ Geo-coded survey data (DHS) collected before and after the civil war in Côte d'Ivoire
- ▶ Women between 15 and 49 were interviewed
- ▶ The average respondent in the pre-treatment sample is 30 years old, has been married for 14 years, has three children, received no formal education and lives in a rural area

# Data Source and Measurement

- ▶ Geo-coded survey data (DHS) collected before and after the civil war in Côte d'Ivoire
- ▶ Women between 15 and 49 were interviewed
- ▶ The average respondent in the pre-treatment sample is 30 years old, has been married for 14 years, has three children, received no formal education and lives in a rural area
- ▶ Dependent variable *Work Outside Home*
  - ▶ Aside from your housework, are you currently working?

# Data Source and Measurement

- ▶ Geo-coded survey data (DHS) collected before and after the civil war in Côte d'Ivoire
- ▶ Women between 15 and 49 were interviewed
- ▶ The average respondent in the pre-treatment sample is 30 years old, has been married for 14 years, has three children, received no formal education and lives in a rural area
- ▶ Dependent variable *Work Outside Home*
  - ▶ Aside from your housework, are you currently working?
- ▶ Independent variable *Treated & Post*

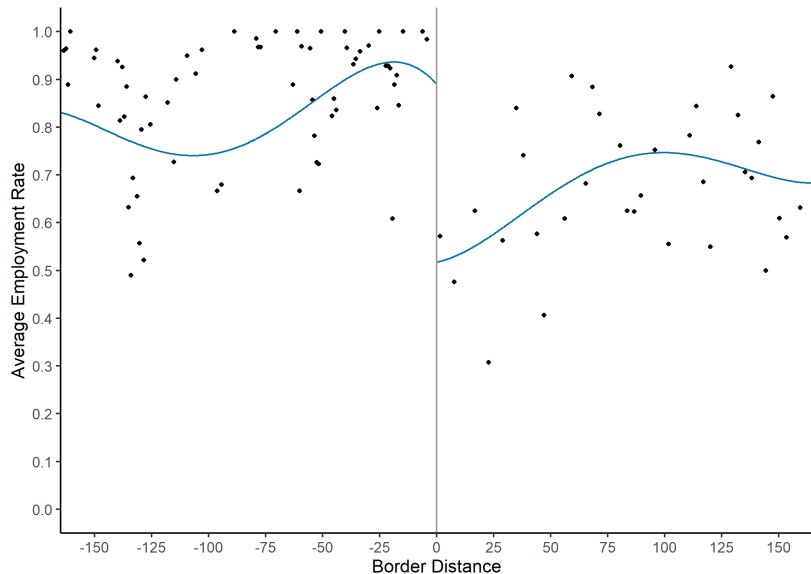

- ▷ Regression Discontinuity coupled with Difference-in-Difference
  - ▶ Arbitrarily drawn border between Côte d'Ivoire and Burkina Faso
  - ▶ Treatment assignment (as-if) random
  - ▶ Compare women living in close proximity on either side of the border ante- and post-civil war

$$Y_{it} = \beta_0 + \beta_1 * X_i + \delta^{SRD} * Treated + \beta_2 * X_i * Treated + q_{it} \quad (1)$$

$$Y_{it} = \beta_0 + \beta_1 * Treated_j + \beta_2 * Post_t + \delta^{DD} * Treated_j * Post_t + Z_{it} + q_{it} \quad (2)$$

# Results I

## Plotting discontinuity

# Results II

Levels of female labour force participation before and after the civil war

	Pre-Treatment		Post-Treatment		$\delta^{DD}$ (%p)
	Côte d'Ivoire (%)	Burkina Faso (%)	Côte d'Ivoire (%)	Burkina Faso (%)	
Work Outside Home	86.36	91.67	57.89	92.72	-29.53

Note: Distance to border  $\leq$  45 km.

# Results III

## Covariate Adjustment

	Dependent Variable: Work Outside Home			
	Model 1	Model 2	Model 3	Model 4
Post*Treated	-0.295*** (0.000)	-0.255** (0.019)	-0.253** (0.018)	-0.250* (0.029)
Observations	1057	1054	1048	1048
Individual controls	No	Yes	Yes	Yes
Household controls	No	No	Yes	Yes
Cluster controls	No	No	No	Yes

Note: Distance to border  $\leq$  45 km. Robust country-clustered SEs in parentheses. \*\*\*  $p < 0.01$ ; \*\*  $p < 0.05$ ; \*  $p < 0.1$

# Potential Mechanisms

# Conclusion

- ▶ Ivoirian women's likelihood to work outside the home is reduced by 25 p.p. post-civil war.

# Conclusion

- ▶ Ivoirian women's likelihood to work outside the home is reduced by 25 p.p. post-civil war.
- ▶ Result is robust to different bandwidths and model specifications.

# Conclusion

- ▶ Ivoirian women's likelihood to work outside the home is reduced by 25 p.p. post-civil war.
- ▶ Result is robust to different bandwidths and model specifications.
- ▶ Preliminary insights into mechanisms: reduction in bargaining power & shift towards more traditional gender norms potential drivers

# Conclusion

- ▶ Ivoirian women's likelihood to work outside the home is reduced by 25 p.p. post-civil war.
- ▶ Result is robust to different bandwidths and model specifications.
- ▶ Preliminary insights into mechanisms: reduction in bargaining power & shift towards more traditional gender norms potential drivers
- ▶ Limitations
  - ▶ No panel data
  - ▶ No information on processes during conflict

# Thank you!
